

Final Project – Forms & JS (FINAL SUBMISSION)

With this deliverable, we will add some interaction with the user on the previous team submission (of course you can modify, and update the html-*you will have to update the html-*, and css of your previous submissions).

All pages must reference one or more *external* JS files.

Here are the requirements for this submission:

- At least one form (more are acceptable if you want to add more) (24 points)
- At least one interaction with the user (Event Listener) (26 points)
- Dynamically manipulate the DOM (see slide 24 from lecture 18 for an example, or individual hw4) (25 points)
- Form Data Validation or Form Data Use (Use data entered in the form to display new content on your page) (25 points)

Your form must include at a minimum 3 different types of elements, not including the reset and submit buttons. Each different element is worth 8 points, when used correctly. You may repeat types, as is common with text inputs, but we need to see 3 different types.

Embedded, or inline JS is not allowed and will be penalized.

You should have fun with this assignment and are encouraged to put funny (but respectful) items in your web site.

Only one submission is needed per team, but you must provide the names of all the team members in the submission or you run the risk of not getting credit for your work.

Good luck!
