

CS 146 – Team Requirements Document

- Write a requirements document for the final project idea you agreed with your team. Be as specific and detailed as you can. The document has to set clear expectations even for someone outside the project.
- Don't forget to include all the 4 parts that are necessary for a requirements document (25 points each).
- For the solution, and constraints parts include at least 5 items for each in order to be as complete as possible.
- For the constraints that you need to describe, come up with realistic constraints based on the idea that you came up for the final project.
- For the measurement of the successful completion of your project include at least two ways to define that.
- This is a team assignment, with the teams as specified in Canvas. You will work in the same teams for the rest of the semester. Only one submission per team will be accepted, but be sure to include the names of all team members that contributed in the submission. Submit the file (pdf) in Canvas before the deadline, which is Friday, Sep 21st, at 11.59pm.
- Good luck!
